

The value of **integrated data** for telematics and fleet fuel cards

Telematics and fuel card data are strong, providing fleet managers with better visibility into vehicle health, driver behavior, and fueling practices. However, when these two critical aspects of fleet management are combined and integrated into one report, insights become even more transparent, making it easier to discern patterns and plan for the future of your business.

Without them, challenges arise from the disconnect between drivers, their vehicles, and your business—which can affect your bottom line over time.

Provides simplified visibility into important metrics

Gathering and displaying more data in one report offers a unified view of all critical vehicle and fuel insights to optimize operations and streamline decision-making.

Helps to reduce fraud

Integrated data allows managers to easily monitor driver and vehicle metrics like daily start and stop times and fueling activity to encourage honesty.

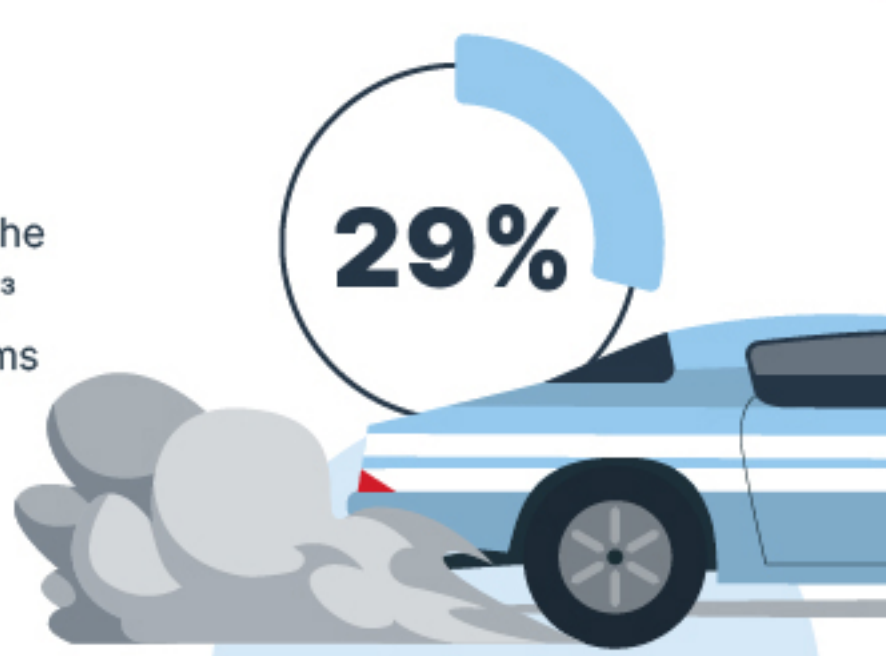

Increases fuel efficiency

Fuel costs have risen higher than any other marginal fleet expense.² With integrated data, fleet managers can analyze fuel consumption patterns to identify inefficient driving behaviors.

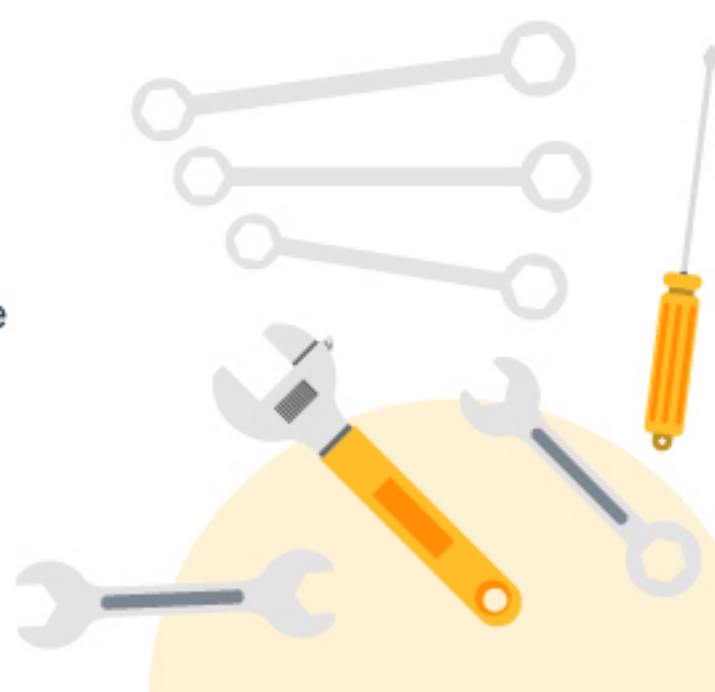

Encourages driver best practices

29% of all traffic fatalities in the U.S. are caused by speeding.³ WEX telematics and dash cams track driver behavior to help managers recognize and reduce bad habits.

Helps augment maintenance planning

Integrating telematics and fuel card data enables near real-time monitoring of fleet vehicles to help managers schedule timely maintenance based on current vehicle conditions.

Keep your vehicles moving efficiently and safely. Learn how telematics and fuel card solutions with WEX can augment fleet management to help you reduce costs, improve route times, and keep your drivers safe.
