

Reduce your insurance costs with GPS tracking

Telematics tools do more than improve operations — they help lower insurance costs. Insurers recognize that GPS tracking improves fleet safety and reduces risk, often offering discounts of up to 30%. Businesses using telematics frequently qualify for lower premiums because safer fleets mean fewer claims.

With telematics in place, your fleet can benefit from:

Improved driver behavior

Telematics provides data on speeding, harsh braking, and sharp turns, helping reduce risky behavior and potentially lowering accident rates by up to 21%.

Enhanced vehicle maintenance

Real-time maintenance alerts help prevent mechanical failures and accidents. Well-maintained vehicles reduce insurance claims and support eligibility for lower premiums

Reduced unauthorized vehicle use

Tracking discourages personal use of company vehicles and limits unnecessary mileage. This lowers overall risk exposure and can improve insurance rates.

Lower accident rates

By monitoring behavior and promoting safe driving practices, businesses experience fewer accidents — leading to reduced insurance costs and a stronger safety record.
